3M™ Advanced Whole
House Filtration Systems

Models: 3MPF201 & 3MPF301

Cleaner, Clearer Water

for your home.

Improve the quality of all incoming water, providing cleaner, clearer water throughout your entire home.

Whole House Filtration Options: Which is Best for Me?

Whole House Filtration for Well Water

- Wells contain naturally occurring particulate that can cause damage by getting in to appliances-- such as dish washers and washing machines
- Particulate can also clog faucet screens causing restricted water flow
- The 3MPF201 is recommended for well water applications to help prevent particulate and particles from getting in to the water stream and damaging appliances

Advanced Whole House Filtration Systems

Corrosion resistant, stainless steel head.

Sanitary quick change cartridges--no spill, no mess.

Better water for your whole house.

Whole House Filtration for City Water

- Many municipalities in the US use chlorine to disinfect public water supplies
- Chlorinating tap water is critical to prevent disease-causing microorganisms forming in the water
- Chlorine in water can affect its taste and odor. It also has a drying effect, which can cause rashes, dryness and hair dullness
- The 3MPF301 helps reduce both particulate and chlorine taste and odor to help improve water quality
